

One-quarter asset growth by size quintile and oil supply shock tercile

Low third of oil shocks

Middle third of oil shocks

High third of oil shocks

Note: Dashed gray line: the quintile's density over all quarters. Gaussian kernel densities of one-quarter total-asset growth, $100 \times (\text{assets at } t / \text{assets at } t-1)$, Silverman bandwidth. Size quintiles are formed each quarter from total assets at $t-1$. Shock groups are terciles of the quarterly Känzig oil supply news shock (sum of the three monthly shocks), cutoffs at its 33rd and 67th percentiles over 1992Q2–2025Q4. Horizontal axis spans the pooled 1st–99th percentiles.

Same densities, terciles overlaid within each quintile

Low third of oil shocks

Middle third of oil shocks

High third of oil shocks

Note: Gaussian kernel densities of one-quarter total-asset growth, $100 \times (\text{assets at } t / \text{assets at } t-1 - 1)$, Silverman bandwidth. Size quintiles are formed each quarter from total assets at $t-1$. Shock groups are terciles of the quarterly Känzig oil supply news shock (sum of the three monthly shocks), cutoffs at its 33rd and 67th percentiles over 1992Q2–2025Q4. Horizontal axis spans the pooled 1st–99th percentiles.
