

Quintile boundary crossings: direction, driver and reversals

Note: One-quarter quintile changes ending in 2017Q1–2026Q2, by the boundary crossed. Own assets: the bank's assets at t place it in a new quintile under the $t-1$ cutoffs; cutoff shift: they would not, so the cutoffs moved past it. Reversed: back in the original quintile within four quarters (crossings after 2025Q2 excluded).
