

Change in return on assets (pp)

Note: Quantiles computed each quarter within each size quintile, then smoothed with a centered four-quarter moving average. Kelley skewness = $(q_{90} + q_{10} - 2 q_{50}) / (q_{90} - q_{10})$. Shaded areas indicate NBER recessions. Percentage-point change in each bank's single-quarter ROA (annualized) from the previous quarter.
