1 Size cutoffs

Figure 1. Quintile cutoffs in dollars. Percentiles of total assets at the start of the quarter ($t - 1$) that separate the five size quintiles, in nominal millions of dollars on a log scale. Shaded areas indicate NBER recessions. Source: FDIC Statistics on Depository Institutions; author's calculations.

Table 1. Distribution of one-quarter changes by size quintile, expansion versus recession quarters. Median, interquartile range, and Kelley skewness are computed each quarter within each size quintile, then averaged over expansion and recession quarters.

Size quintile	Median		IQR		Kelley skewness	
	Exp.	Rec.	Exp.	Rec.	Exp.	Rec.
<i>Total assets (%)</i>						
Q1	0.91	2.01	5.22	6.27	0.21	0.32
Q2	1.05	2.16	4.58	5.48	0.16	0.23
Q3	1.12	2.24	4.25	5.04	0.15	0.18
Q4	1.17	2.28	3.96	4.66	0.14	0.16
Q5	1.27	2.27	3.93	4.87	0.17	0.15
<i>Equity to assets (pp)</i>						
Q1	0.00	−0.15	0.74	0.92	−0.21	−0.41
Q2	0.02	−0.12	0.61	0.74	−0.10	−0.23
Q3	0.03	−0.09	0.54	0.65	−0.07	−0.14
Q4	0.04	−0.09	0.49	0.58	−0.05	−0.11
Q5	0.04	−0.11	0.46	0.60	−0.04	−0.07
<i>Return on assets (pp)</i>						
Q1	0.01	−0.01	0.71	0.83	0.03	0.08
Q2	0.01	−0.02	0.52	0.63	0.01	0.00
Q3	0.00	−0.02	0.44	0.56	−0.01	−0.05
Q4	0.00	−0.03	0.38	0.54	−0.01	−0.08
Q5	0.01	−0.05	0.35	0.63	−0.02	−0.13
<i>Net interest margin (pp)</i>						
Q1	0.00	−0.05	0.34	0.44	0.00	−0.07
Q2	0.00	−0.03	0.29	0.37	−0.01	−0.04
Q3	0.00	−0.03	0.26	0.35	−0.01	−0.04
Q4	0.00	−0.02	0.24	0.31	−0.01	−0.06
Q5	0.00	−0.02	0.22	0.30	0.00	−0.10

2 Kernel densities by size quintile

Figure 2. Change in total assets (%): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percent change in each bank’s total assets from the previous quarter; changes include mergers and acquisitions. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 3. Change in equity capital to assets (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s equity capital to assets from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 4. Change in return on assets (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter ROA (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 5. Change in net interest margin (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter net interest margin (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 6. Change in net loans and leases (%): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percent change in each bank’s net loans and leases from the previous quarter; includes mergers; banks with no loans in the previous quarter are excluded. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 7. Change in total deposits (%): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percent change in each bank’s total deposits from the previous quarter; includes mergers. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 8. Change in Tier 1 leverage ratio (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s Tier 1 leverage ratio from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 9. Change in noncurrent loans to loans (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s noncurrent loans to loans from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 10. Change in net charge-offs to loans (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter net charge-off rate (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 11. Change in provisions to assets (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter provisions to assets (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 12. Change in cost of funding earning assets (pp): pooled distribution by size quintile. Gaussian kernel density, Silverman bandwidth. Horizontal axis spans the pooled 1st–99th percentiles. All quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter cost of funding earning assets (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

3 Ridgelines: the distribution year by year

Figure 13. Change in total assets (%), by year, all banks. Gaussian kernel density of one-quarter changes, all quarters of each year pooled; each curve is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percent change in each bank’s total assets from the previous quarter; changes include mergers and acquisitions. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 14. Change in equity capital to assets (pp), by year, all banks. Gaussian kernel density of one-quarter changes, all quarters of each year pooled; each curve is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percentage-point change in each bank’s equity capital to assets from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 15. Change in return on assets (pp), by year, all banks. Gaussian kernel density of one-quarter changes, all quarters of each year pooled; each curve is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percentage-point change in each bank’s single-quarter ROA (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 16. Change in net interest margin (pp), by year, all banks. Gaussian kernel density of one-quarter changes, all quarters of each year pooled; each curve is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percentage-point change in each bank’s single-quarter net interest margin (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

4 Empirical histograms by size quintile

Unsmoothed counterparts of the kernel densities in Section 2. Each quintile's distribution is drawn as a step histogram on common equal-width bins over the same window, with no bandwidth choice involved. Mass points the kernel spreads out (for example, the exact zeros in charge-offs and provisions from banks with none in either quarter) appear here as single tall bins.

Figure 17. Change in total assets (%): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percent change in each bank's total assets from the previous quarter; changes include mergers and acquisitions. Source: FDIC Statistics on Depository Institutions; author's calculations.

Figure 18. Change in equity capital to assets (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s equity capital to assets from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 19. Change in return on assets (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter ROA (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 20. Change in net interest margin (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter net interest margin (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 21. Change in net loans and leases (%): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percent change in each bank’s net loans and leases from the previous quarter; includes mergers; banks with no loans in the previous quarter are excluded. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 22. Change in total deposits (%): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percent change in each bank’s total deposits from the previous quarter; includes mergers. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 23. Change in Tier 1 leverage ratio (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s Tier 1 leverage ratio from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 24. Change in noncurrent loans to loans (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s noncurrent loans to loans from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 25. Change in net charge-offs to loans (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter net charge-off rate (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 26. Change in provisions to assets (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter provisions to assets (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 27. Change in cost of funding earning assets (pp): pooled empirical distribution by size quintile. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 120 equal-width bins; all quarters pooled. Quintiles are formed each quarter from total assets at $t - 1$. Percentage-point change in each bank’s single-quarter cost of funding earning assets (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

5 Empirical ridgelines: the distribution year by year

Unsmoothed counterparts of the ridgelines in Section 3: one histogram per calendar year, all banks.

Figure 28. Change in total assets (%), by year, all banks: empirical histograms. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 80 equal-width bins; all quarters of each year pooled; each histogram is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percent change in each bank’s total assets from the previous quarter; changes include mergers and acquisitions. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 29. Change in equity capital to assets (pp), by year, all banks: empirical histograms. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 80 equal-width bins; all quarters of each year pooled; each histogram is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percentage-point change in each bank’s equity capital to assets from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 30. Change in return on assets (pp), by year, all banks: empirical histograms. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 80 equal-width bins; all quarters of each year pooled; each histogram is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percentage-point change in each bank’s single-quarter ROA (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.

Figure 31. Change in net interest margin (pp), by year, all banks: empirical histograms. Histogram with no kernel smoothing; bar heights are bin counts divided by the full sample size and the bin width, so they share the vertical scale of the kernel densities. Horizontal axis spans the pooled 1st–99th percentiles. 80 equal-width bins; all quarters of each year pooled; each histogram is scaled to a common peak height. Orange: years overlapping an NBER recession (2001, 2008, 2009, 2020). *2026 covers Q1–Q2 only. Percentage-point change in each bank’s single-quarter net interest margin (annualized) from the previous quarter. Source: FDIC Statistics on Depository Institutions; author’s calculations.
